

Component Solutions Relocates Offices and Warehouse to Bristol, RI

Bristol, Rhode Island, August 5, 2010 – Component Solutions, Inc., a leading supplier of custom industrial components, announced today that it has moved its headquarters from Cranston, Rhode Island, to a 10,500 square foot steel frame facility located at 16 Peckham Drive in Bristol’s East Bay Industrial Park.

Previously, Component Solutions leased space on Elmwood Avenue in Cranston, which suffered severe damage following the flooding of the Pawtuxet River on March 30, 2010.

“We had been looking for a new space for some time, but the flood was the precipitating event that made us move,” said David Reardon, President of Component Solutions. “We operated in our old building for over ten years, and as our company grew, so did our need for more office space as well as a larger warehouse that could accommodate three times the amount of inventory. This new location was the perfect solution for us.”

The Bristol facility was built in 1987 and is situated on 1.3 acres. It features a 9,000 square foot distribution center with four drive-in doors and one loading dock from which the company ships parts to customers across the United States daily; a quality control lab; a reception area; a break room; and four office spaces.

Component Solutions closed on the property last month.
